

## Description

Dinkey Dongles are produced to a unique, ingenious design that ensures outstanding security. With most dongle protection systems, however, it is the software interrogating the dongle that is the weakest part of the protection. At Microcosm we have been producing robust protection software since 1989. Over the years we have developed strong anti-debug techniques and advanced encryption methods. This expertise has been applied to the Dinkey system to provide the ultimate in dongle protection. Encryption is automatically implemented and is different each time you protect your software.

Our **DinkeyNet** dongles have all the features of Dinkey 2 but also allow you to use one dongle per network instead of one dongle per workstation.

In addition, you can limit the number of simultaneous network users of your product. If the dongle is protecting more than one program then you have the choice of specifying the maximum number of simultaneous network users for each program or for the product as a whole.

## Supported Operating Systems

- All Windows version (98 onwards, including Vista and x64 but excluding CE and Pocket PC)
- Mac OS X (Intel and Power PC chipsets)
- Linux

## Technical Specifications

- **Interface:** USB 1.1 +
- **Data retention:** >50 years
- **Power:** 5.0 volts, <25mA
- **Temperature:** -65°C to +70°C
- **Weight:** 5 grammes
- **Dimensions:** 50mm x 15.5mm x 7.5mm

## Software Developers Kit (SDK)

The Dinkey SDK allows you to add the protection to your software and program the dongles. Also included with the SDK are:

- Free software upgrades for life
- Technical support via email and telephone
- Sample code for all the major programming languages

## Ordering and Prices

When you place your first order you'll need our SDK for a one off payment of £95. The DinkeyNet dongle prices start at just **£25**.
